All submitted inquiries have been addressed. The cutoff for inquiries has passed and no further inquiries will be addressed.

RESPONSE TO RFI'S:

1. Drawing C102 and C402 describe a hydraulically operated vehicle barrier to be installed in this project. We are having trouble with vendors of this type product due to the lack of information provided. Can a specification with more detail be provided?

Response: Additional information is not available at this time. Please propose based on the information provided in the RFP.

2. Concerning the auger cast pile length; the new bid form released in Addendum 6 provides the total number of Linear Meters for the piles (3,686) in Item 0001F. Based on 271 total piles on the project, this averages out to a per pile length of 13.6M. However, Foundation Note #2 on the General Structural Notes sheet (S-001) states that the piles should be installed to a tip elevation of -15.5M. Based on the current approximate grade of the site, the top of the piles will be at an elevation of approximately +2M. That makes the piles approximately 17.5M in length or a total of 4,742.5 Linear Meters of piling for the job. Please clarify.

Response: The pile length of 13.6 meters is the actual usable pile length as shown in the pile detail sheet S-502. The usable pile length is measured from the tip elevation of (-15.5 M) to the top of the 4 inch concrete pile embedment into the concrete pile cap.

The overall pile length during construction varies based on the pile installation process and the existing grade.
